

Exporting dataframe to CSV

Export dataframe to CSV

To export our dataframes to a csv, use the code:

```
df.to_csv('file_name.csv')
```

where

- df is the name of the dataframe we want to export.
- "file_name.csv" is the name of the CSV file that we are creating.

The new CSV file will be created in the same folder where you saved this ipynb file.

If you want to export the dataframe without the index, add index=False:

```
df.to_csv('file_name.csv', index=False)
```

Overwritting

If you use the same CSV name to save another dataframe, the original data will be overwritten

```
df2.to_csv('file_name.csv') # The original data in file_name.csv will be replaced by the data in df2.
```

Download code

Download the sample code from this chapter's Dropbox. The file is "Exporting dataframe to CSV.ipynb"
